Additional information

What can you make in color?

- 🔹 Bag
- 🔹 Handles
- 🔹 Lining
- 🔹 Pocket

What's the difference between basic and extra colors?

- 🔹 **BASIC colors**
The difference between these fabrics is the weave and the weight. The weave is a little thicker and we also have the most basic colors in this option.
- 🔹 **EXTRA colors**
The extra color fabric has a smaller weave and is a little lighter. This option is available in more than basic colors.

What's the difference between pretreated cotton fabric and non pretreated cotton fabric?

- **PRETREATED cotton fabric**

The pretreated fabric undergoes a chemical process that protects the material, making it softer. While making certain imprints, the ink is absorbed and sinks in better. It also depends on the chosen printing method e.g. printing with water ink.

- **NON PRETREATED cotton fabric**

The non pretreated cotton fabric is raw and without pretreatment. Most of our fabrics are without treatment. This does not have an influence on the basic imprints.

Explanation of concepts

ORGANIC COTTON

Organic cotton is made of a square, tight weave. It is made of, or closely related to, products of plant or animal origin. This material is available in a natural color and its weight is 150, 220 or 260.

RECYCLED COTTON

Recycled cotton is one of our flagship fabrics. It is characterized by a loose straight weave. It is made of 96% recycled cotton canvas and 4% recycled PET plastic which makes the material durable.

GLOBAL RECYCLED STANDARD

It is an international, uncompiled standard that specifies requirements for the certification of recycled fibers. The aim of GRS is primarily to increase the use of recycled materials with care for the environment, social conditions and control of chemicals used that are safe for humans and the environment.

GOTS

GOTS certificate confirms that the products are made of at least 70% organic raw materials. The origin of GOTS-certified materials must be natural and the cultivation must be carried out using ecological methods and based on strict international terms. The dyes used must be biodegradable.

OEKO-TEX

The Deko-Tex standard is a certificate that confirms the quality of textile products designed for the direct contact with human skin. Granting the certificate is preceded by tests to verify that the material does not contain at least one of the hundred most dangerous substances that could be a risk to consumers.
